Share a Good Explanation (5 year old can also Understand)on the Topic :-"Proxies In terms of computers"? *

The word proxy means "to act on behalf of another," and a proxy server acts on behalf of the user. All requests to the Internet go to the proxy server first, which evaluates the request and forwards it to the Internet. Likewise, responses come back to the proxy server and then to the user.

A proxy server is a computer system or router that functions as a relay between client and

server. It helps prevent an attacker from invading a private network and is one of several tools used to build a firewall.

What are Your Desktop/Laptop Specifications? *

Processor: AMD A4-3330MX APU with Radeon(tm) HD Graphics 2.20GHz

RAM: 2GB

System Type: 32-bit Operating System,x64 based processor

What is Your Regular Wifi / Broadband Internet Speed? *

☐ Low Speed

☒ 40 MBPS+
